# Press Release

## U.K. telecom authority awards place on Framework to Computech

### **IT firm set to compete for auction design & implementation work in London**

Bethesda, MD *Monday June 22, 2009* The United Kingdom's telecommunication authority, the Office of Communication (Ofcom), awarded Bethesda-based Computech a place on its consultancy services framework to provide auction design and implementation support through 2012. Much like the FCC does in the U.S., Ofcom regulates the UK's broadcasting, telecommunications and wireless communications sectors. The organization sets and enforces rules on fair competition between companies in these industries, and is responsible for the release of available spectrum to the market, generally by means of an auction.

According to Al Dominick, Vice President of Business Development, being awarded a place on this framework is a special accomplishment: "Many people don't realize that spectrum is a finite, and especially valuable, natural resource. As telecommunication firms create new mobile applications, demand for spectrum will only continue to rise. As a result, being able to fairly, and efficiently, allocate spectrum through an automated auction is essential for a public authority like Ofcom. We are grateful for the opportunity to work with our colleagues in the U.K. as they enhance their auction program, and excited to help Ofcom continue to allocate spectrum in a fair and transparent manner."

About Computech: Computech, an information technology consulting firm, develops, implements, and maintains sophisticated business-critical information systems for public and private organizations. Since 1979, the firm's core values of commitment, teamwork, integrity, professional excellence, and entrepreneurial spirit have allowed Computech to help its clients succeed. The firm's experience designing, developing, and operating Internet-based spectrum auction systems are unparalleled, with government clients like the Federal Communications Commission and Mexico's Cofetel.
